

# display.found()

This method indicates whether the most recent call to `display.grid.getRecord()` found a record.

## Return Value

A boolean value is returned. True indicates a subfile grid record was found and retrieved. False indicates the record was not found.

## Example

```
// Get the third record
display.grid.getRecord(3);

if (display.found()){
    // do something with found record, etc.
}
```

## RPG Equivalent

%FOUND()
