

pjs.equal()

This method is used to determine if the most recent call to [file.positionTo\(\)](#) on any file found an exact match.

Return Value

A Boolean value indicating whether/not an exact match was found.

Example

```
myfile.positionTo(["keyVal1", "keyVal2"]);  
if (pjs.equal())  
  doSomething();
```

RPG Equivalent

%EQUAL()

Requirements

This API requires the [Profound.js Connector](#) module.
