display.found()

This method indicates whether the most recent call to display.grid.getRecord() found a record.

Return Value

A boolean value is returned. True indicates a subfile grid record was found and retrieved. False indicates the record was not found.

Example

```
// Get the third record
display.grid.getRecord(3);

if (display.found()){

 // do something with found record, etc.

}
```

RPG Equivalent

%FOUND()
