

file.open()

This method opens the file.

Exception Handling

An Error instance will be thrown with the following properties:

- message - The message text.
- error - The message id.
- help - The message help text.

Example

Open file, read first record, close file

```
pjs.defineTable("productsp", { userOpen: true, read: true });
productsp.open();
productsp.fetchNext();
productsp.close();
```

RPG Equivalent

OPEN

Requirements

This API requires the [Profound.js Connector](#) module.
