

display.grid.replaceRecords()

The `replaceRecords()` API clears a grid and then adds an array of records to it.

Parameters

- array of records

i Each element of the array is a JavaScript object with properties representing the fields in the grid.

Example

```
pjs.defineDisplay("display.json"); // assume display.json defines mygrid with fields named "product" and
"description"

display.mygrid.replaceRecords([
  { product: 1, description: "ITEM ONE" },
  { product: 2, description: "ITEM TWO" },
  { product: 3, description: "ITEM THREE" },
  { product: 4, description: "ITEM FOUR" }
]);
```
