

Query String Parameters

The following query string parameters can be passed to Profound UI.

- pgm - The qualified program name. e.g LIBRARY/PROGRAM
- container - Optional reference to an element, or an id of an element, where the application will be rendered. If not passed, "pui" is used by default.
- workstnid - Assigns a workstation id to your session.
- suffixid - Flag that if enabled avoids duplicate job names by appending a suffix (1 or 0).
- duplicateid - Flag that if enabled allows duplicate job names (1 or 0).
- p1, p2, p3.... - list of parameter values to be passed to the program (see [here](#) for more details)
- l1, l2, l3..... - list of lengths for the parameters listed above (see [here](#) for more details)
- controller - points to a PHP controller to start a Rich Display File application built with PHP.
- log - Turns logging On or Off (1 or 0).
- debug - Allows you to debug with STRDBG ([see here](#)).
- jsonURL - Loads a json screenshot instead of running a program.
- lang - (requires Profound UI 6 fix pack 8.0 or newer) lets you specify a language id in the URL as an alternative to setting pui.language and PUISETLANG.
