

# file.unlock()

This method releases a locked record.

This is only supported with the IBM i database and not using SQL.

## Exception Handling

An Error instance will be thrown with the following properties:

- message - The message text.
- error - The message id.
- help - The message help text.

## Examples

### Unlock record

```
pjs.defineTable("myfile", { keyed: true, read: true, update: true });  
myfile.fetchNext(); // First record locked  
myfile.unlock();
```

## RPG Equivalent

UNLOCK

## Requirements

This API requires the [Profound.js Connector](#) module.
