

file.equal()

This method checks for an exact match after a call to [file.positionTo\(\)](#) on a specific file.

Return Value

A Boolean value indicating whether/not an exact match was found.

Examples

Conditional logic using exact match state

```
myfile.positionTo(["keyVal1", "keyVal2"]);  
if (myfile.equal())  
    doSomething();
```

RPG Equivalent

%EQUAL(file_name)

Requirements

This API requires the [Profound.js Connector](#) module.
