

Slider

Overview

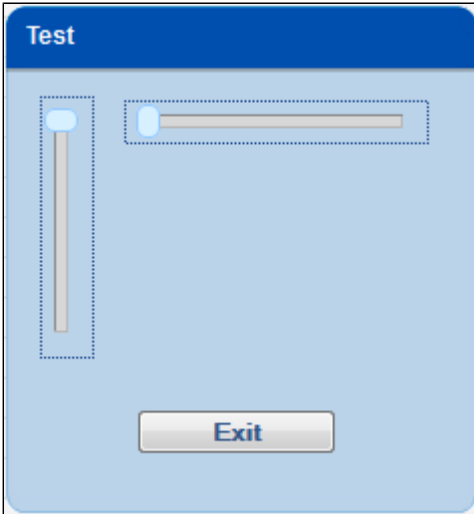

The slider widget allows a user to drag the slider to increase/decrease a value of a numeric field.

Field Binding Dialog (Rich UI Only)

Please visit the [Field Binding](#) page.

Slider Widget Properties

orientation - This property determines the orientation of the slider widget. This can be set to either a horizontal or vertical orientation.

minimum value - Sets the minimum value for the slider widget. This property may be bound. **(Rich UI Only)**

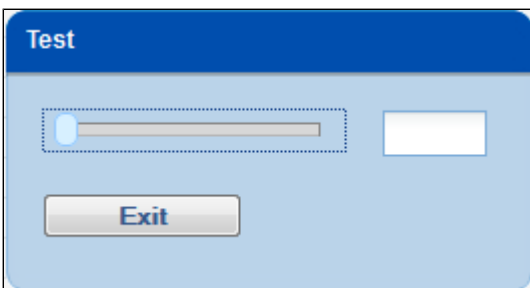

maximum value - Sets the maximum value for the slider widget. This property may be bound. **(Rich UI Only)**

increment value - Sets the increment the value will adjust when the slider widget is increased or decreased. The default value is '1'. This property may be bound. **(Rich UI Only)**

Showing Slider Widget Values

A quick way to show a value alongside the slider widget itself is quite easy. Using a couple of our [commonly used APIs](#) you can have a textbox/output field display the slider's selected value.

Start by adding a textbox/output field with the slider widget.

Then add the following JavaScript code to the widget's onchange event:

```
changeElementValue("TextBox1", get("Slider1"));
```

You should now see the returned value from the slider widget in your textbox/output field as the slider is moved.
