

Genie Detect Subfile Options

By default, when "detect subfile patterns" is true, Genie will automatically detect subfile options such as 2=Change, 5=View, etc, and will convert them into a combo box. If you set this option to false, it will no longer detect these options and create a combo box.

```
pui.genie["detectSubfileOptions"] = false;
```

To use this option, place it at the top of the custom.js file in your Genie skin.

Available in Profound UI Version 5, Fix Pack 6.0 and later.
