Load Fields Into Widgets

Allows database driven grids to load their data into widgets. This method loads the data a page at a time. To generate this grid as a load-all see: load all rows

Promptable? DROPDOWN
**Possible Values:** true, false
Bindable? No
Products: ProfoundUI

Available in Profound UI Version 6 Fix Pack 8.0.

Set up

To use, the grid should be set up with widgets to hold the data in each column, with the chosen database-driven method. The widgets should be bound, and the binding name should match the column name from the table.

In this example, the "database file" method will be used.

database file	PUISAMPLES/POSTP
database fields	POSTCITY,POSTSTATE,POSTZ

Loading data into widgets

To load the data into the widgets, set the "load fields into widgets" property to true.

load fields into widgets	true

Now the data can be formatted using any of the widget properties. For example, here the color is set to red,the text centered, and a 1000s separator added to the numerical data.

postcity	poststate	postzip	postname
ANAKTUVUK	AK	99,721	NORTH SLOPE
ANAKTUVUK PASS	AK	99,721	NORTH SLOPE
ANCH	AK	99,505	ANCHORAGE
ANCHOR POINT	AK	99,556	KENAI PENINSULA
ANCHORAGE	AK	99,501	ANCHORAGE
