

# Default Date Format

This option sets the default date format the calendar icon will use on a date widget that does not have Date formatting selected. For example, when Character or Number formatting are selected.

**Example:**

The following line sets the default date format to USA with 4 digit year

```
pui.defaultDateFormat="MM/DD/YYYY";
```

If this option is not specified it will default to "MM/DD/YY"

Where do you save this configuration option? [Here](#).
