

# Load All Rows

Allows database driven grids to load all the data upfront when loading their data into widgets.

*Must be used with property "load fields into widgets"*

**Promptable?** DROPDOWN

**Possible Values:** true, false

**Bindable?** No

**Products:** ProfoundUI

*Available in Profound UI Version 6 Fix Pack 8.0.*

## Loading all data into widgets

To load all the data upfront make sure the "load fields into widgets" is set to true and then set the "load all rows" property to true.

load fields into widgets	true
load all rows	true

Depending on the length of the table being accessed, it may take a while to load.

Note: If using the DataURL method of retrieving the data, the property sends a limit of -1.
