

# setTab( tab )

This method activates a specific tab within a Tab Panel or Tab Layout widget.

**Parameter:**

- tab – the tab number to activate. The first tab is tab 0, the second tab is tab 1, etc.

See also the global method, `setTab( tabPanelid, tab )`, which can be called before the widget renders.

**Example:**

```
getObj("TabPanel1").setTab(1); // this activates the second tab
```

*Available in Profound UI Version 5, Fix Pack 10.0 and later.*
